

QuickPort

Interfacing with your QuickBooks Accounting management software has never been so easy. Importing and exporting various data entities from QuickBooks is now made easy with our user friendly application - QuickPort.

Comma Separated Value (CSV) formatted files are most commonly used for carrying data. We chose to interface with this format, both for import and export, so that you benefit from simple format.

Dynamic mapping of CSV file headers with the attributes in QuickBooks entities avoids any special pre-formatting of the input .csv files. This makes the import processes easier and quicker.

Key Points

- ✓ Simple to install and easy to use
- ✓ Provides both import and export functionality
- ✓ Comma separated value (CSV) format
- ✓ Dynamic mapping of fields and attributes
- ✓ Pre-formatting not required
- ✓ Works with the latest QuickBooks Accounting software
- ✓ Supports USA, Canada and UK editions of QuickBooks.
- ✓ Supports QuickBooks single and multi user modes.
