

# Scrinter

Ever wished you had a program to automatically capture the activities on your desktop screen for a period of time, and then allow you to quickly view the captured screen as a video?

We are happy to inform that Scrinter can do that for you. Some scenarios where you can effectively use Scrinter are discussed here.

## Application Installations

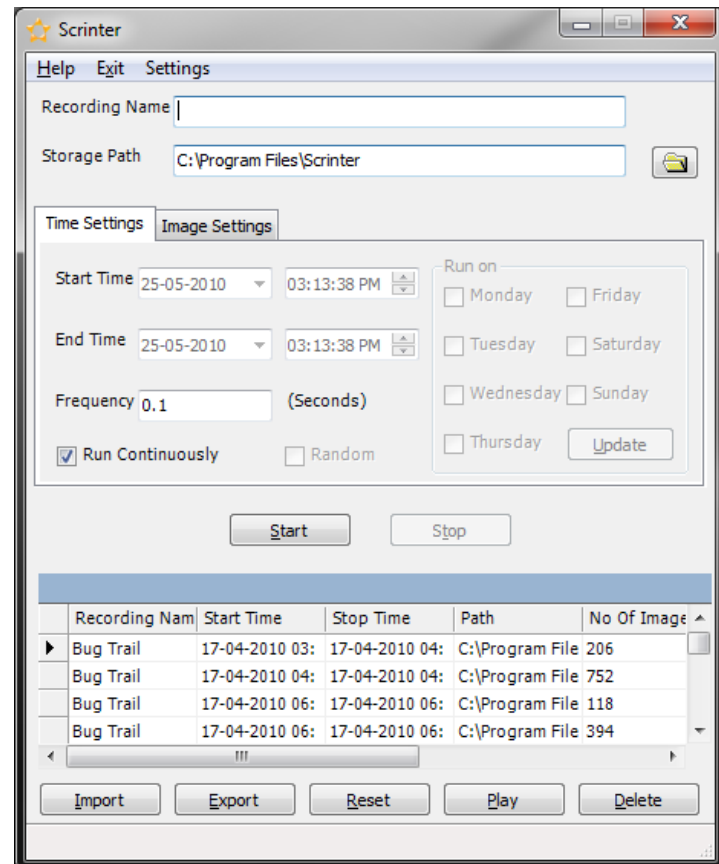

If you are tech. savvy, you inevitably install many applications on your PC(s). Some of them are simple and some are complex. In case of a complex application, we select various options during installation and enter critical information such as usernames and passwords. We have to either remember or make a note of them in a safe place for reference. How many can we remember? Or is the place safe and secure? Keep Scrinter ON, while you are installing any application. Irrespective of the number of times the installation restarts your PC, Scrinter will keep capturing the screens. When you want to refer the previous installation process, simply view the entire procedure as a video.

## Recording Demos

Application demo enhances the knowledge transfer rate. Demos are very effective in marketing. Scrinter allows you to create such demos with its 0.1 second frequency screen recording capability.

## Convert to Video

Your recordings could be converted to video files very easily making it easy for you to share the recordings with friends, colleagues and customers.

## Time Tracking

When employees do a variety of activities in a day, it is difficult for them to fill the correct time in the time tracker. Let Srinter capture the activities and it will help the employees identify the correct amount of time spent on each activity.

## Issue Reporting

The sequence of a set of actions that cause an error are normally difficult to explain to the programmer or the support engineer. Srinter makes life easier - just send the Srinter output to the support/program engineer, he can see all the details, and provide correct and a quick fix.

## The Stealth Mode

The stealth option in Srinter allows you to hide it's visibility in the system tray when running. This will help you track any unscrupulous employees misusing their and as well as your resources.

## Key points

- ✓ Simple to install and easy to use.
- ✓ Facilitates three types of recordings (immediate, one-set and recurring)
- ✓ Choice of record formatting (BMP, JPEG, GIF, PNG and TIFF)
